

LinguaChat

REAL-TIME MULTILINGUAL CHAT SPACE

Complete User Manual & Design Guide

Featuring 12 Premium Visual Themes &
Secure Time-Limited Message Editing & Unsending

1. Welcome to LinguaChat

LinguaChat is a state-of-the-art real-time multilingual messaging application. It breaks language barriers by automatically translating messages server-side before they reach your screen. You type in your preferred language, and everyone in the chat room understands in theirs instantly.

Key Features:

- * Zero-Translation Delay: Server-side translation using encrypted mock translators.
- * 12 Premium Workspace Themes: Fully customizable spaces with background images.
- * Time-Limited Messages: Edit or unsend any sent message within a 2-minute window.
- * Privacy First: End-to-end socket level encryption using dynamic room keys.

Step-by-Step: Logging In & Creating a Room

1. Enter Username: Type a unique display name (max 15 characters).
2. Select Your Language: Choose from 10 supported languages (English, Hindi, Russian, Spanish, French, German, Chinese, Arabic, Portuguese, Japanese).
3. Enter Avatar: Select a text prefix, character, or emoji avatar symbol.
4. Choose Action: Click 'Create Room' to host a new chat session, or enter a 6-digit code and click 'Join Room' to join an existing session.

2. Managing the Chat Space

The Room Lobby

After logging in, if you are the creator, you enter the Room Lobby. Here you can see the unique 6-digit room code, verify who is connected, and start the chat room when everyone is ready. The layout is optimized for maximum clarity on desktop and mobile viewports alike.

Dynamic Multilingual Messaging

Once in the chat room, incoming messages are instantly translated into your selected language. If a translation takes place, a globe icon appears next to the text. You can click 'Show Original' under the bubble to view the sender's original message. Outgoing messages are encrypted and automatically delivered without manual translation steps.

3. Advanced Chat Control & Theme Selection

Time-Limited Edit & Unsend (2-Minute Rule)

To ensure conversation integrity while giving users flexibility:

- * Hover (Desktop) or Tap (Mobile) on your own message bubble within 2 minutes to reveal the Edit and Unsend control buttons.
- * Editing a message shows a clear ribbon above the input box, allowing you to edit and save. The server updates and pushes re-translations instantly to all clients.
- * Unsending a message deletes it permanently from the server and removes it from the screen of all room participants.

12 Premium Visual Themes

You can switch between 12 visual themes by clicking settings (gear / triple dots) in the sidebar settings menu. The themes are organized into a clean 6-column grid:

- * Solid Themes: Midnight Charcoal (Default), Royal Amethyst, Ocean Breeze, Sunset Glow, Forest Moss.
- * Background Image Themes: Sunlit Cats, Garden Ripples, Starry Tulips, Watercolor Leaves, Constellations, Purple Blobs, Grainy Gradient.

All creative themes support translucent panels and backdrop blur overlays, letting the background design blend beautifully while keeping text readable.
